DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 183-209 and 223-249 are rejected under 35 U.S.C. 103(a) as being unpatentable over Numbers (5,775,404) in view of Allied Signal Aerospace.

Numbers discloses substantially all claimed elements of an aircraft deicer system, including a boom mounted on a vehicle, a compressor supported upon the vehicle, and a deicer air jet nozzle located on the boom and connected to the compressor. See especially Figure 2a. Numbers fails to show the compressor "at the base of the boom" or connected (at least directly) to the boom. Allied Signal Aerospace teach, in a similar deicer system, that it is known to mount the air compressor and pump of the forced air system in a cubical enclosure at the base of the deicing boom. See especially the top of page 2. Motivation to combine is the mere substitution of the placement of the forced air equipment of Numbers such that it performs the same function but is at the base of the boom instead of at a further distance from it. To employ the teachings of Allied Signal Aerospace and have the compressor at the base or connected to the boom is considered to have been obvious to one having ordinary skill in the art. Also, the specific operating parameters of the system is considered to be non-patentable engineering details which would be arrived at without undue experimentation and would be normally chosen in order to provide the desired performance for a particular situation.

3. No interference is being declared. Although Applicant states that they have "copied the claims from Foster '823 for the purpose of provoking an interference", it does not appear that these claims have, in fact, been copied. Instead the different phrases of "at the base of the boom" or "connected to the boom" have been substituted for the Foster phrase of "supported by the

Art Unit: 3644

boom.” Since these phrases involve different limitations, a declaration of interference is not deemed proper.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to J. Woodrow Eldred whose telephone number is 703-306-4151. The examiner can normally be reached on Monday to Thursday, from 8:00 a.m. to 5:30 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner’s supervisor, Charles Jordan can be reached on 703-306-4159. The fax phone numbers for the organization where this application or proceeding is assigned are 703-305-7687 for regular communications and 703-305-7687 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-306-4177.
